academic projects

Writer & Character Designer, Hit & Haunted

January - April 2025

- Conducted self-playtesting and playtesting sessions, evaluating narrative flow, gameplay pacing, and player interactions, and documenting feedback for iterative improvements.
- Conceptualized the designs of the main characters, making sure that their personalities shined through their silouhettes and shape design.
- Assisted in preparing assets and builds for release on Steam, contributing to overall project organization and polish.

Character Designer & Modeler, Night Market Madness

September - December 2024

- Modeled seven characters and created animation sets integrated into a Unity finite state machine, testing transitions to ensure consistent behavior across idle, interaction, and failure states.
- Quickly conceptualized four different unique vendors, each with distinct personalities that can be quickly infered through their design.

Modeller & Animator, Aquatic Adventures

January - April 2024

- Referenced real-world footage to ensure realistic animation, maintaining consistency between model, rig, and motion.
- Modeled and weight-painted a stylized crab and two additional creatures, ensuring clean deformation and smooth rigging.

personal projects

Programmer & Artist, OCBallLab

April 2026 - Present

- Programmed a variety of modded characters in Godot, each with different mechanics and varying levels of technical complexity, ensuring each character delivered a distinct and engaging gameplay experience.
- Developed and integrated a new game mode with a boss fight within the existing codebase.
- tilized spreadsheets to test ball performances to ensure they're well balanced.

skills

Organization
Game Prototyping
3D Modeling

technical skills

Unity Engine	Python/gdscript
Blender	Godot
Clip Studio Paint	

education

Simon Fraser University
Interactive Arts and Technology, BA
Expected Graduation: JUNE 2027
